ACADEMIC PROJECTS
University Procurement Cell

 The application records the procurement & distribution details of exam booklets and miscellaneous goods to the exam centers & colleges under Kakatiya University. It includes the generation of the invoice for each transaction. It provides a module to search for a booklet in case of any malpractice based on centre code or booklet code.

Tools used: *HTML, CSS and JavaScript*

Predictive Analysis of Big Mart Sales Using Machine Learning Algorithms

  Currently, Supermarket RUN-CENTRES, Big Marts keep track of each individual item's sales data in order to anticipate potential consumer demand and update inventory management. By harnessing machine learning techniques such as XGboost, Linear Regression, Random Forest Regression, and Decision Tree Regression, we developed a predicative model to forecast sales for businesses akin to Big mart.

Tools used: Python, Machine learning techniques

LANGUAGES
Fluent in the written and oral communication of English
